¹ Calculated Using USDOE Website Calculator: 64 USG daily @ \$1.09 per therm (natural gas) or \$0.12/kWh. ² Compared to the same power source vs 10-year-old 40-gal. gas or 52-gal. elec. ³ Standard Tub-30 gallons, 20 gallons of hot water ⁴ Garden Tub-75 gallons, 50 gallons of hot water ⁵ Assuming a shower head flow rate of 2.5 GPM

⁶ All showers are assumed to be 8 minutes long with a shower head flow rate of 2.5 GPM ⁷ Solar thermal package based on installation with 2-panel 120-gal. tank system appropriately sized and installed correctly for the location ⁸ Tankless will fill with reduced flow rates

All performance indicators calculated using a water heater set point of 120 degrees F, an inlet water temperature of 40 degrees F, and a shower/tub temperature of 105 degrees F. For specific tub capacity and fill rates consult online sizing guide or your plumbing professional. Some models run at higher input ranges and may require larger gas lines and specialized venting and installation considerations.
